

VANTAGE

We made it easy for you to launch a data analytics solution for test and manufacturing!

Dynamic Database

Eliminate the difficulty of the first mile - managing all those test data files. Your database is built automatically as data is stored. No DB coding or schemas.

Rapid Perspectives

Easy to use web app to create and view trend, stats, and metrics reports because you don't have a team of data scientists to help you get to root cause.

Yield and Evaluation

Don't rely on the tester to determine quality. Re-check your data after the fact with diagnostic trees and binning to perfect your yield criteria.

Automation

Let the software create your routine reports while you're asleep. Subscribe to and share reports with your team. Get alert notifications on reports.

Customizable

So you've got proprietary algorithms and custom summary reports? No problem, our platform supports custom plugins.

Cross Platform

Don't want to start a platform war? Neither do we. Our REST API integrates with your platforms: Windows, Linux, Unix, C++, Python, LabVIEW and .NET

VERIFIDE
